Liposome Methods And Protocols Methods

The aim of Liposome Methods and Protocols is to bring together a wide range of detailed laboratory protocols covering different aspects of liposome biology in order to assist researchers in those rapidly advancing medical fields mentioned earlier.

In Liposome Methods and Protocols, a panel of skilled researchers describes in step-by-step detail their best laboratory techniques for elucidating liposome biology and realizing this promise. With these readily reproducible methods, investigators can illuminate such critical questions as the attachment of liposomes to cell surfaces, the ...

Methods The design of the liposome association experiments can be divided into three sections. If it is known from prior studies that a specific lipid binds to a full-length protein, then one aspect of the experimental design is to determine the region or regions within the protein that mediate such association.
